

# **Taco Rocket Baby**

## **Tokenomics & White paper**

### **(TRB)**

#### **Taco Rocket Baby**

TRB is a Tezos FA2.0 token that aims to make it easy for users to free up time splitting up assets and trying to find Tezos projects to invest in. Think of it as “Hands Off Farming”.

The reason this token is created is because there are many people interested in Tezos who do not necessarily have the time to get deep into the ecosystem, but want to participate in Tezos Defi in a more manageable way.

#### **Token Distribution**

**Total Capital raised = 199,998USD**

(assuming Tezos price = 3\$)

**Total Supply 77,777**

66,666 for donations (one sale only)

10,000 for initial liquidity

1,111 for dev team (meat locker)

TRB is a community effort and private donations were taken from various community members to get the kickoff fund. Private donations are taken on a 1 Tez/1 TRB basis. Liquidity pool will be provided from the donated funds and the starting price of TRB will be 1Tez/1TRB. Taco Rocket Baby will be powered by KryptStar bakery.

20% of all donated funds will be put into the KryptStar Bakery as a stable investment, and the TRB token will receive all payments in Tez as if it were a bond holder, and all Tez profits will be sold for TRB and burned (using Crunchy’s burn pit).

25% of donated funds will be used in various private/pre/sales around the Tezos community, with a focus supporting projects that provide good tokenomics and whose members have strong community standing. The community will decide when to sell the funds to buy/burn Taco Rocket Baby. If the community has no reaction the funds will be sold for TRB on a set schedule and the bought TRB will be burned (Crunchy’s burn service)

35% of the funds will be put into various farming services where the profits will be traded for TRB and then that TRB will be burned(again, Cruncy’s burn service).

10% of the donated funds will be used to provide liquidity to the TRB, the community will vote via Telegram/discord etc to decide which AMM/DEX the liquidity should be removed/added to. If community doesn’t have a strong opinion then KryptStar will decide. Liquidity will be added on August 15, 2021 to allow time for more donations at the 1tez/1TRB price.

10% of the funds will be used for partnerships, farms, payments for listings if necessary.

**Liquidity:**

Taco Rocket Baby liquidity will be provided by community members in order to participate in various collaboration farms.

**Ultimate Goal:**

The ultimate goal of TRB is to tie the Tezforce community together and align us on our goals and use the Tezos protocols strengths to our advantage. We also wish to benefit the community in a positive light.

**Management Address:**

Taco Rocket Baby will have a set Tz1 management address with a KT1 contract for the token itself. All transactions can be tracked through that KT1 address. If some sort of Tezos-based opportunity is seen outside of Tezos (for example, wrapping with Bender Labs), we will register the external address on our website and be open with the community about the opportunity and where the funds will be used.

Management Address:

`tz1SJV4HjjMftVWEcYRhYaC4kGW8kQoNoRDX`

Bank Address (profit taking)

`tz1X3sDR17L35hok8mwzeMA2126FsTN6SLQk`

Baker address:

`tz1aDiEJf9ztRrAJEXZfcG3CKimoKsGhwVAi`

**In Case of Project Retirement:**

If the founders decide to move on to or start a new project, there will be 60 days notice given and all Taco Rocket Baby holders will receive a final airdrop of the remaining donated funds. If in the event there is a longer lockup due to pre-sale conditions and requirements, the final drop will be done after that time period passes.
